# Pile Driver Shroud

The Hushtec Pile Driver Shroud has an innovative design that reduces the impact noise made by steel cylindrical piles. Each cylindrical Pile Drive Shroud rig is 24 inches and attaches to the pile via strong magnets.

You can then connect as many rigs together as you need, encasing the full length of the pile and significantly reducing noise. Pile Driver Shrouds are also made to be tough, so they can handle even the most challenging of conditions.

## Pile Driver Shroud

### **Hushtec USA Pile Drive Shroud**

The Hushtec pile attachment was designed specially to mitigate noisy pile driver banging in or around residential areas and reduce the noise build up sensitive environments. The innovative design helps reduce the impact sound emitted by the steel cylindrical piles during impact.

Noise reduction technologies must be practical to use as well as being effective. The Hushtec Pile Driver Shroud checks all the boxes. It is quick and easy to fit and dramatically reducing noise during pile driving operations.

The overall design is functional allowing operators full visibility during the piling driving process.

### **Customizable**

All shrouds are available in custom colors and logos as needed.
