HUSHTEC-USA™

NOISE CONTROL SOLUTIONS

HT1-Pickleball

HUSHTEC-USA® HT1 Sound Panels

HUSHTEC-USA® HT1 panels are specifically engineered to reduce noise on pickleball courts, creating a quieter and more enjoyable environment for both players and nearby communities. Constructed from high-quality, sound-absorbing materials, these panels effectively minimize sound reflection from walls and hard surfaces. The result is a more controlled acoustic experience that enhances gameplay and reduces noise pollution.

HUSHTEC-HT1 Series: Engineered for Performance and Simplicity

The HUSHTEC-HT1 Series is intelligently designed for maximum noise reduction and effortless installation. Each barrier features the innovative HUSHLOCK™ Velcro system, with 2” (50mm) seams on both sides to ensure secure, high-strength connections—making it fully compliant as a modular, clip-together noise barrier system.

To accommodate a wide range of mounting options, heavy-duty tensioned eyelets are positioned along the top and bottom edges. This allows for easy attachment to various structures, including temporary site fencing, scaffolding, timber hoardings, and other common substrates.

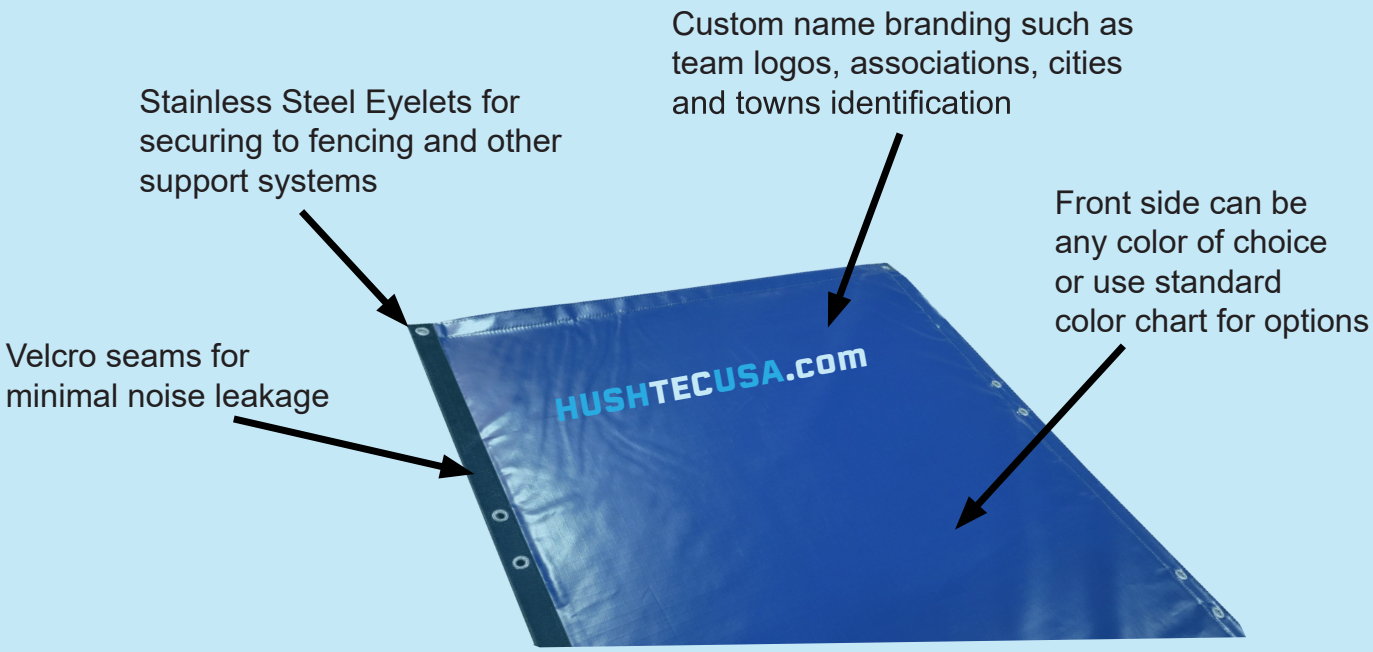
Design to Seal the Sound

HUSHTEC-USA® HT1 panels are designed with Velcro seams that not only help secure the panels together during assembly but also prevent sound leakage that would typically escape through the HT1 panel overlay, thereby reducing noise 1.



Specifications

- Acoustic Specifications: RW23, STC23
- 100% Customizable, any shape, size and color
- Weatherproof for outdoor & indoor use
- Velcro connected for minimal noise leakage
- Tensioned Eyelets for added install points
- Standard Length: 8 ft, 10ft and 12ft
  Standard Width: 4 ft
  (Custom sizes available)

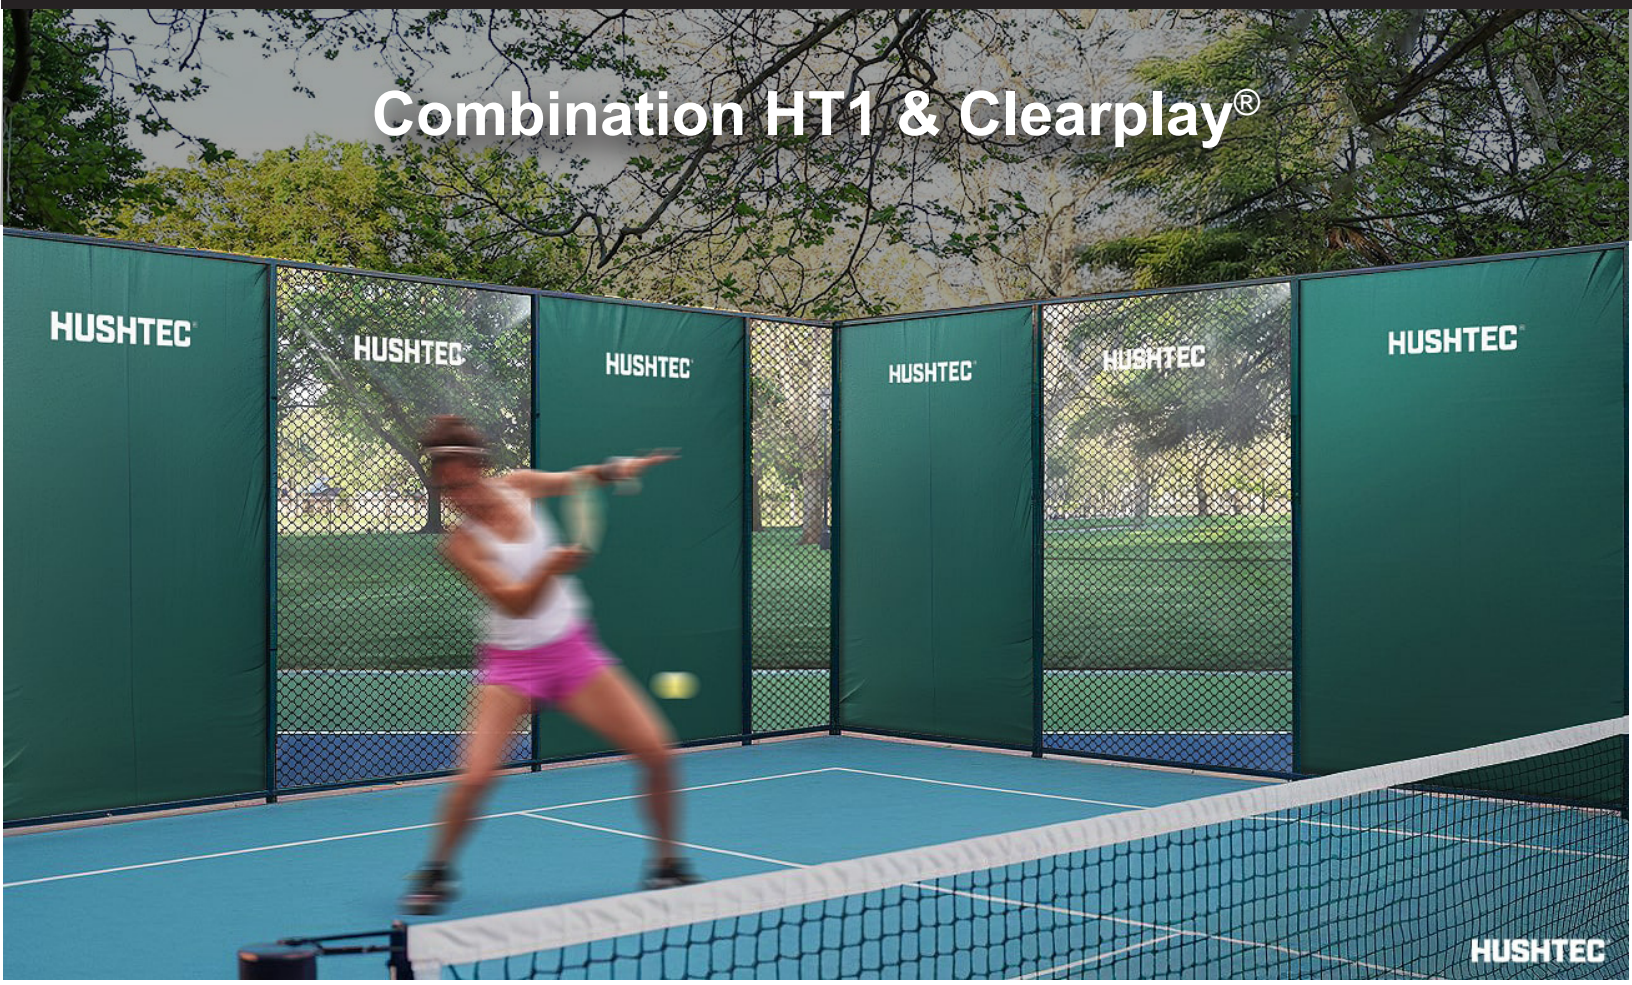
HUSHTEC-USA™

Noise Control Solutions

CLEARPLAY 360™



The Ultimate Sound Mitigation System

Combining the HUSHTEC One Series with ClearPlay® panels delivers the most advanced noise control solution for pickleball courts. The seamless integration of panels using the HUSHLOCK™ Velcro system ensures a tight, secure seal between each unit—maximizing sound containment and minimizing noise leakage. This combination offers unmatched performance in both acoustic control and visual clarity.
